### Our on-board luggage :

- ✦ Ventilators with neonate to adult modules
- ✦ Multi Para Cardiac Monitor with Invasive and non invasive modules
- ✦ Cardiac Defibrillator (with Extended Battery back up)
- ✦ Temporary Pacemaker device (Invasive as well as Trans cutaneous)
- ✦ Uninterrupted Oxygen Supply
- ✦ Drug infusion & Syringe pumps
- ✦ Neonatal Incubator

### Air Ambulance in Commercial planes :

These kinds of services are provided to shift a patient with maintained hemodynamics, requiring only oxygen support/ stretcher/ cardiac monitoring/ infusion or syringe pumps/ doctor and medical personal etc., These are usually used to transfer patient from long distances in India and abroad. The patient can only be transferred on the time/ presence of commercial flights and the availability of seats. For lying patients, a stretcher and for sitting patients, a seat can be arranged in such flights. We use the latest "State- of- the- art" equipments, which can provide ICU care on commercial flights.

**Ayushman Life Support Ambulance** are ICU on wheel vehicles with life saving state of all equipments and all emergency medications thus creating an environment similar to and intensive care unit.

At **ALSA (Ayushman Life Support Ambulance)** we design our vehicles specially for long distance critically ill patient transfer. While designing our ambulance we focus on long distance. Patients transfer and put facilities keeping in mind all uncertainties and requirements. Our team for Doctor and paramedics are highly professionals & well trained and has experienced of thousands long distance critical ill patients transfer via road from remote and urban areas.
